

Predicting a latent population summary from survey estimates: what the interval is sensitive to, and what that costs

Authors. *To be completed before submission.* Give each author's full name, affiliation and postal address, and mark the corresponding author with an e-mail address.

Author One,¹ Department, Institution, City, Country. E-mail:

Author Two, Department, Institution, City, Country.

Running head. Scale sensitivity of latent-target survey intervals.

Funding. *To be completed.* Use the journal's wording, "This work was supported by the [full agency name] [grant number xxxx]." If there was no external funding, say so.

Conflict of interest. *To be completed.*

Preregistration. Each experiment reported in this paper was governed by a protocol written and committed before the experiment was executed, stating the design and its predictions. The protocols, the results and the predictions that failed are in the replication materials. The study as a whole was not preregistered with a public registry.

Acknowledgments. *To be completed.* Data are from the European Social Survey rounds 9–11, obtained from the ESS data portal under its End User Licence; ESS ERIC bears no responsibility for the analyses or interpretations here.

Use of generative artificial intelligence. *To be completed by the authors,* in accordance with the journal's and publisher's policy at the time of submission.
