Author's relationship to the cited working paper

The manuscript characterises an adaptive implementation of a design-aware correction and corrects the feasibility criterion published with it. That implementation and criterion are the author's own, in a working paper cited in the blinded manuscript as "Reference withheld for blind review". The correction of it is therefore self-correction rather than criticism of a third party, and the blinded text says so without identifying the source. The working paper is:

Park, K. (2026). The Wrong Unit of Uncertainty: Simultaneous Inference for Repeated Cross-National Surveys. Working paper.

That paper is not under consideration at this journal.

Data availability

The simulation results of Sections 5 and 4.1 require no microdata and reproduce from the replication repository. The survey analyses use European Social Survey integrated data, rounds 9–11, distributed under the provider's End User Licence and not redistributable; the repository documents the edition, variables, exclusions and retrieval route.

Funding and competing interests

This research received no specific grant from any funding agency, commercial or not-for-profit sector. The author declares no competing interests.
